Token Action HUD for TOR2E is an independent community module. It is not affiliated with or endorsed by the publishers of The One Ring. Screenshots come from the project's own demonstrations and may differ slightly from your version, theme or language. Labels from the game system follow the system's translation, so your wording may vary.

CHAPTER 1

The HUD at a glance

Select a token and everything on its sheet is one click away: rolls, stances, gear, rests, conditions, songs and macros.

This module connects the **The One Ring 2nd Edition** game system to **Token Action HUD Core**, a movable toolbar for Foundry VTT. Core draws the toolbar. This module fills it with TOR2E content for characters, adversaries, NPCs and lore actors.

What you can do

- **Roll without opening a sheet:** skills, proficiencies, Valour and Wisdom, Protection, weapon attacks and community songs.
- **See numbers at a glance:** Endurance, Hope, Shadow, Load, TNs, Parry, Fellowship Points and more.
- **Manage gear in combat:** equip, unequip or drop weapons and armour with a modifier-click.
- **Change stance** in one click, with each stance's combat task and bonuses shown.
- **Mark skills as favoured** and **songs as used**.
- **Apply conditions** to one token or a whole group at once.
- **Run the table as Loremaster:** add tokens to combat, target tokens, and decide what players may see and do.
- **Launch macros,** organised by your Foundry folders.

The menu map

A selected token shows up to seven top-level menus. A menu only appears when it has something to show for that token.

Stats
Attributes
Resources

Trait items	**Yes**	Yes, plus Fell Abilities	**Yes**	**Yes**
Occupation	–	–	**Yes**	**Yes**
Equipment Gear, Rest	**Yes**	–	–	–
Health	All five statuses	Weary, Wounded, Poisoned	Weary, Wounded, Poisoned	Weary, Wounded, Poisoned
Effects	**Yes**	**Yes**	**Yes**	**Yes**
Community	If a member	–	–	–
Macros	**Yes**	**Yes**	**Yes**	**Yes**

CHAPTER 2

Installation guide

Install three modules on your Foundry server, then enable them in your world. It usually takes a few minutes.

Requirements

COMPONENT	STATUS	MINIMUM	VERIFIED UP TO
Foundry VTT	Required	12	14
The One Ring 2nd Edition game system	Required	4	6
Token Action HUD Core	Required	2.0.13	Any 2.x is accepted
socketlib	Required by Core	–	–
Color Picker	Optional	–	Enables colour pickers in Core's settings

CHOOSE THE CORE VERSION FOR YOUR FOUNDRY

Core's newest releases no longer run on older Foundry builds, so check this first.

YOUR FOUNDRY VERSION	INSTALL CORE	NOTE
13.351 or later, including 14	Latest 2.1.x	Verified by Core up to 14.368
12.331 up to 13.350	2.0.16	The last 2.0.x release; use the manifest below

```
https://github.com/Larkinabout/fvtt-token-action-hud-core/releases/download/2.0.16/module.json
```

Install the modules

Do this on the Foundry setup screen, with no world running. You need administrator access to the server.

1. Open the **Add-on Modules** tab and click **Install Module**.
2. Search for **Token Action HUD TOR2E** and click **Install**.
3. When Foundry offers to install the dependencies, accept. If it does not offer, install **Token Action HUD Core** and **socketlib** the same way.

OR INSTALL FROM THE MANIFEST URL

Paste this into the **Manifest URL** field at the bottom of the Install Module window. It always points to the latest release.

```
https://github.com/tdakanalis/token-action-hud-tor2e/releases/latest/download/module.json
```

Enable it in your world

1. Launch a world that uses The One Ring 2nd Edition and log in as Gamemaster.
2. Open **Game Settings** and click **Manage Modules**.
3. Tick **Token Action HUD for TOR2E**, **Token Action HUD Core** and **socketlib**.
4. Click **Save Module Settings** and let the world reload.

> **Same module, two names.** The package directory lists it as "Token Action HUD TOR2E". Inside a world it appears as "Token Action HUD for TOR2E".

Check that it works

1. Open a scene and click a token you own. The HUD appears with the token's name above a row of menus.
2. Hover over **Skills**, then click a skill. The system's roll dialog should open.
3. Ask a player to do the same. If nothing appears for them, check **Allow HUD** in Core's settings (Chapter 9).

Update or remove

To update, return to the setup screen and click **Update** on the module in **Add-on Modules**, or **Update All**. To remove it, disable it in each world, then delete it from the same tab. Keep Core if another system's HUD uses it.

> **Before you upgrade Foundry or TOR2E,** check the Requirements table above. A newer Foundry than the verified version shows an "unverified" notice but the module still loads. Back up your world first: a major system update can change things this module depends on.

CHAPTER 3

Using the HUD

Select a token, hover over a menu, click an action. The numbers and colours tell you the rest.

1. **Token name.** Whose actions you are looking at.
2. **Menus.** Hover to open. Core can switch this to click.
3. **Group.** A heading inside the open menu.
4. **Rating.** Six diamonds; filled ones show the current value.
5. **Tag.** Extra information such as Favoured.

One token or many

SELECTION	WHAT YOU GET
One token	The full set of menus for that actor (Chapter 4 and Chapter 5).
Several tokens	Group tools: Combat Utilities, Health, Effects and Macros (Chapter 6).
Nothing selected	The HUD hides, unless **Always Show HUD** is on in Core and you have an assigned character.

Reading the HUD

Up to three small values follow an action's name, always in the same colours.

POSITION	COLOUR	TYPICALLY SHOWS
First	Amber	The main value: a rating such as ◆◆◆◇◇◇, a current value, or a stance's combat task.
Second	Green	The context: a TN, a maximum, weapon damage, or the **Favoured** tag.
Third	Blue	The extra: weapon injury, or the **Magical** tag on a skill.

Active things are highlighted. Your current stance, a travel role you hold, a used song, and any status or effect in place are all marked. Hover over an action to see its description as a tooltip, where it has one.

CHAPTER 4

Character reference

Player-heroes get the fullest HUD. Here is every entry, menu by menu.

Rolls opens a roll or runs the action Toggles switches a state on or off Read-only information; clicking does nothing

Stats

GROUP	ENTRIES	SHOWS	CLICK
Attributes	Strength, Heart, Wits	Rating and TN	Read-only
Resources	Endurance, Hope	Current and maximum	Read-only
	Shadow	Shadow scars plus temporary Shadow	Read-only
	Load	Total Load and Fatigue	Read-only
Heroic Stature	Valour, Wisdom	Rating	Rolls
Advancement	Skill Points, Adventure Points	Current and total	Read-only
	Treasure	Current value	Read-only

Skills

The 18 common skills sit under their attribute, each with its rating and any **Favoured** or **Magical** tag. Click to roll. Alt + click marks or unmarks the skill as favoured, the same modifier the system uses on its sheet.

ATTRIBUTE	SKILLS
Strength	Awe, Athletics, Awareness, Hunting, Song, Craft
Heart	Enhearten, Travel, Insight, Healing, Courtesy, Battle
Wits	Persuade, Stealth, Scan, Explore, Riddle, Lore

Combat

In combat. Rearward is the active stance. Utilities appear for the Loremaster.

WEAPONS

An equipped weapon shows proficiency, damage and injury. **Click to attack.** Weapons that are not equipped do not roll.

ATTRIBUTES

Parry shows its value and shield bonus. **Protection** shows armour and headgear dice. Click Protection to roll it.

ARMOUR

Equipped armour shows its protection value. Clicking it does not roll.

UNEQUIPPED AND DROPPED

Gear you are not using moves into these groups, so you can see it and get it back quickly.

GROUP	SHOWS	CLICK	MODIFIERS
Equipped Weapon	Rating, damage, injury	Rolls	Ctrl equip Alt unequip Shift drop Right-click opens the item sheet.
Equipped Armour	Protection value	Read-only	
Unequipped, Dropped	As above	Read-only	
Parry	Value and shield bonus	Read-only	
Protection	Armour and headgear dice	Rolls	
Combat Proficiencies	Rating for each weapon group	Rolls	Rolled as not favoured

STANCES

Stances appear only when the character's token is in a combat. Click one to take it. The active stance is highlighted, the name of its combat task is shown beside it, and hovering shows its bonuses. The game system decides which stances are on offer, so you may not see all five.

STANCE	COMBAT TASK	TOOLTIP SUMMARY
Forward	Intimidate Foe	Your attacks +1d. Enemy close attacks against you +1d.
Open	Rally Comrades	No bonuses or penalties.
Defensive	Protect Companion	Enemy close attacks against you −1d. Your attacks −1d per engaged foe.
Rearward	Prepare Shot	Ranged only. Only targeted by ranged attackers.
Skirmish	Gain Ground	Ranged only. Your ranged attacks −1d. Enemy melee attacks against you −1d.

Traits

Distinctive Features, Flaws, Virtues and Rewards are listed by name. They are Read-only on left-click: hover to read the description, or right-click to open the item sheet.

Miscellaneous

Miscellaneous. Screenshot from before Daunted was added to Health.

EQUIPMENT GEAR

Your miscellaneous items. Hover for the description; right-click for the sheet.

REST

Rolls **Short** and **Prolonged** run the system's own rest actions.

HEALTH AND EFFECTS

Toggles Click to apply or remove. Active ones are highlighted. The Loremaster can turn these off for players (Chapter 9).

STATUS	TOOLTIP
Weary	1–3 on Success Dice count as 0.
Wounded	Risk knockout; recover 0 Endurance on short rest; recover STRENGTH Endurance on prolonged rest.
Poisoned	Cannot rest; roll for Endurance loss daily.
Miserable	Sauron Eye counts as auto-fail.
Daunted	Apply or remove the Daunted condition.

Effects are Dead, Unconscious and Invisible. They can also show as a large overlay on the token (Chapter 9).

Community

This menu appears when the character is a member of the world's **current community**. To set that up, open the community actor's sheet, add the characters as members and make it the current community.

GROUP	SHOWS	CLICK
Travel	Guide, Hunters, Scouts and Lookouts, each with its skill and who holds it. Your own role is highlighted.	Read-only
Fellowship Points	Current and maximum	Read-only
Songs	Community songs, grouped by type: Song of Victory, Lay and Walking-Song. Used songs are highlighted.	Rolls Plays the song Alt marks it used Right-click opens it
Eye Awareness	Current and maximum. Hidden from players by default.	Read-only

> **Who performs a song?** A player sings as their assigned character, so the user needs one set in Foundry. A Loremaster picks a community member from a list. The song is a Song skill roll against the singer's Strength TN, and a success is posted to chat.

CHAPTER 5

Adversaries, NPCs and lore

These actors get a shorter HUD built around what the Loremaster needs in play.

Adversaries

GROUP	ENTRIES	CLICK
Attributes	Attribute Level; Might with maximum	Read-only
Resources	Endurance with maximum; Hate or Resolve with maximum, following the adversary's sheet setting	Read-only
Equipped Weapon	Skill rating, damage, injury	Rolls attack
Unequipped, Dropped	Weapons not in use	Read-only
Attributes (Combat)	Parry; Protection	Protection Rolls ; Parry Read-only
Fell Abilities	Name and cost; description in the tooltip	Read-only ; right-click opens
Health	Weary, Wounded, Poisoned	Toggles
Effects	Dead, Unconscious, Invisible	Toggles

> Modifier-clicks that equip or drop gear work on characters only. To change an adversary's weapons, use its sheet.

NPCs

GROUP	ENTRIES	CLICK
Attributes, Resources	Attribute Level; Endurance with maximum	Read-only
Skills	The NPC's own skill items, under Strength, Heart or Wits when the skill names one	Rolls Alt toggles favoured
Traits	Occupation, plus any trait items	Read-only
Health, Effects	Weary, Wounded, Poisoned; Dead, Unconscious, Invisible	Toggles

Lore actors

A lore actor shows its **Occupation** and any trait items, and has the same Health and Effects toggles as an NPC.

CHAPTER 6

Group actions

Select several tokens and the HUD switches to tools that work on all of them at once.

Several tokens selected. The Loremaster's view: Combat, Miscellaneous and Macros.

MENU	ACTION	WHO	WHAT IT DOES
Combat	Add to / Remove from Combat	Loremaster	Toggles every selected token's combat state. The label reads Remove only when all of them are already in combat.
Miscellaneous	Health	Allowed players	Weary, Wounded and Poisoned. Miserable and Daunted are added when the selection includes a character.
	Effects	Allowed players	Dead, Unconscious and Invisible.
Macros	Your macros	Everyone	The same list as for a single token.

Each token flips individually. Group actions do not bring tokens into line. If one token is already Weary and two are not, clicking Weary clears the first and applies it to the other two. An action is highlighted if any selected token has it.

Loremaster combat tools

With a single token selected, the Loremaster also gets **Utilities** in the Combat menu:

- **Add to / Remove from Combat** for that token.
- **Target / Remove Target**, once the token is in combat. Targeting a token clears your other targets.

CHAPTER 7

Macros

Every macro you can use is one click away.

- **Click** to run a macro. The Macros menu appears with one token or several.
- **Folders become groups.** Each macro is listed under its Foundry folder's name. Macros outside a folder go under “macros”. Folders with the same name merge into one group.
- **Visibility follows ownership.** You see a macro when your own permission on it, or failing that its default permission, is above None. This applies to the Loremaster too.

CHAPTER 8

Click reference

One page to keep beside you at the table.

ACTION	CLICK	RIGHT-CLICK	ALT	CTRL	SHIFT
Skill (character or NPC)	Roll	–	Favoured on/off	–	–
Character weapon	Attack, if equipped	Item sheet	Unequip	Equip	Drop
Character armour	–	Item sheet	Unequip	Equip	Drop
Adversary weapon	Attack, if equipped	Item sheet	–	–	–
Valour, Wisdom, Protection	Roll	–	–	–	–
Combat proficiency	Roll	–	–	–	–
Stance	Take stance	–	–	–	–
Short or Prolonged rest	Rest	–	–	–	–
Health, Effects	On/off	–	–	–	–
Song	Play	Song sheet	Used on/off	–	–
Traits, Equipment Gear	–	Item sheet	–	–	–
Macro	Run	–	–	–	–

> **Holding a modifier never rolls.** Alt, Ctrl or Shift on an action with no modifier behaviour does nothing, so a stray key cannot trigger an unwanted roll. Right-click needs **Open Item Sheet on Right-Click** to be on in Core's settings.

Equip, unequip and drop

Ctrl + click moves an item to Equipped, Alt + click to Unequipped, and Shift + click to Dropped. The change works from any of those groups.

Dropped. The Dagger has moved to the Dropped group, and the character sheet updates to match.

CHAPTER 9

Settings and permissions

Four world settings let the Loremaster decide what players can see and do.

Module settings

Open **Game Settings**, then **Configure Settings**, and find the module's section. Changes apply when you save and close the window.

SETTING	DEFAULT	EFFECT
Allow players to apply health statuses	On	When off, players lose the Health groups for single tokens and groups.
Allow players to apply effects	On	When off, players lose the Effects groups for single tokens and groups.
Allow players to see Eye Awareness	Off	When on, players can see Eye Awareness in the Community menu.
Enable token overlay for effect statuses	On	Dead, Unconscious and Invisible show as a large overlay on the token. Health statuses are not affected.

> **These limits are enforced, not just hidden.** A player with a HUD that was already on screen when you changed a setting still cannot use the blocked action. The Loremaster always keeps full access.

Who can do what

FEATURE	LOREMASTER	PLAYER
Rolls, stances, rests, gear on owned actors	**Yes**	**Yes**
Health statuses and Effects	**Yes**	If the setting allows
Eye Awareness	**Yes**	If the setting allows
Combat Utilities	**Yes**	–
Play a community song	**Yes**	Yes, with an assigned character
Mark a song as used	**Yes**	Only as an owner of the community actor

Useful Core settings

Token Action HUD Core controls how the HUD looks and behaves. These are the ones people ask about most.

CORE SETTING	WHAT IT DOES
Enable HUD	Shows or hides the HUD. Press H to toggle it (the default hotkey).
Allow HUD (GM)	The lowest user role allowed to use the HUD.
Always Show HUD	Shows your assigned character without selecting a token.
Click to Open	Menus open on click rather than hover.
Direction, Dragging	Whether menus expand up or down, and when the HUD may be moved.
Style, HUD Scale	The theme and the size of the HUD.
Open Item Sheet on Right-Click	Enables right-click to open sheets.
Reset HUD	Returns the HUD to its default layout.

Customising the layout: click the padlock beside the menus to unlock the HUD, then add, move or remove groups and actions. Core's How to Use Token Action HUD guide covers this.

CHAPTER 10

Troubleshooting

Most problems come down to a version mismatch, a setting, or a token in the wrong state.

The HUD

The HUD does not appear.
Check that all three modules are enabled and that a token you own is selected. Press H in case the HUD was toggled off. For players, check **Allow HUD** in Core's settings.

I see "requires ... version 2.0.X, but version 2.1.1 is installed".
You are running an older copy of this module. Update it to 1.6.0 or later, which accepts any Core 2.x.

Foundry will not install or enable Core.
Your Foundry build is probably too old for the latest Core. Use the version table in Chapter 2.

A group is missing after an update.
If you have customised the layout, a newly added group may not appear in it. Add it from the unlocked HUD, or use **Reset HUD** in Core's settings. A reset discards your customisation.

Combat and gear

Clicking a weapon does nothing.
Only equipped weapons roll. Ctrl + click a character's weapon to equip it first.

There are no stances.
Stances are for characters whose token is in a combat. Add the token to the encounter first.

Right-click does not open anything.
Turn on **Open Item Sheet on Right-Click** in Core. Right-click only opens items, so it does nothing on a common skill or a stat.

Community and permissions

The Community menu is missing.
The actor must be a character and a member of the world's current community. Check both on the community sheet.

Playing a song fails for a player.
The user needs an assigned character. Set it in Foundry's user configuration.

Alt + click does not mark a song as used.
Songs belong to the community actor, and only its owners can change them. Ask the Loremaster to mark it, or to grant ownership.

Players cannot see Health, Effects or Eye Awareness.
These follow the world settings in Chapter 9. Eye Awareness is off by default.

A macro is missing.
Give your user, or the default permission, at least Limited access on the macro.

Getting help

Report bugs and request features on the GitHub issue tracker. Include your versions of Foundry, the TOR2E system, Core and this module. The changelog lists what changed in each release.
